1. Hotel Management System

1.1.Database Planning

We can Divide our Hotel Management System Into Following Sections.

1.1.1 Mission Statement

“The purpose of Hotel Management System is to help out Stack-Holders in Manage them room bookings and optimize their profit. The system will keep track of the rooms and generate information related to finance, room booking, and Generate financial report.”

1.1.2 Mission Objective of Database

Mission Objective of the database is

- To maintain (Enter, Update and Delete) data on rooms
- To maintain (Enter, Update and Delete) data on Customer
- To maintain (Enter, Update and Delete) data on Managers
- To maintain (Enter, Update and Delete) data on Customer Activities
- To maintain (Enter, Update and Delete) data on Bookings
- To maintain (Enter, Update and Delete) data on Finance
- To maintain (Enter, Update and Delete) data on Free Rooms
- To maintain (Enter, Update and Delete) data on Booked Rooms
- To maintain (Enter, Update and Delete) data on Room Cancellation
- To maintain (Enter, Update and Delete) data on Branch
- To maintain (Enter, Update and Delete) data on Employees
- To maintain (Enter, Update and Delete) data on Wages
- To maintain (Enter, Update and Delete) data on Viewing

1.2.Task Assign to Members

1.2.1 Abdul Haseeb Khan And Khanzada Haider Ali:

Abdul Haseeb Khan and Khanzada Hadier will design and develop the Login Functionalites in Our Hotel Managemnt System by interacting with database to validate the user. This task does not include any java program or moduling. It's purely SQL related. We will be able to finish our tasks in the project as soon as

Hotel Management System

we learn the queries required to do our task. Our task includes the handling of making of new ids by the users. This includes first time making of a new id which includes unique usernames as provided by the user and the password. After making of the new ids the users can log in through the data they provided. This will include cross checking of the usernames and passwords across the ids of the users. Our work will take almost a week if we know the certain queries which we will learn as the classes go by.

Mission Objectives:

To maintain (Enter, Update and Delete) data on Customers

To maintain (Enter, Update and Delete) data on Managers

To maintain (Enter, Update and Delete) data on Employees

ER DIAGRAM:

1.2.2 Ashfaq Rahim And Hasssan Shah Nawaz

Mission objective modules of our project:

Develop and design the dashboard functionalities after user will login the system.

SCOPE:

We want to choose the metrics that matter. We want to keep it visual. We want to make it interactive for collaboration. We want to pull data from all sources to get the full picture and keep the dashboards up to date or refreshed. And, finally, we want to make it simple to access and easy to use.

TIME AND COMPLEXITY:

The time taken for developing and designing dashboard is 2 months. Building an effective dashboard according to best practices for dashboard design is the culmination of a comprehensive process that would usually include gathering requirements, defining, and creating a data model. However, the importance of proper dashboard design should not be understated. Poorly designed dashboards could fail to convey useful information and insights and even make the data less comprehensible than it was originally.

MISSION STATEMENT:

The mission of our hotel is to provide outstanding lodging facilities and services to our guests. Our hotel focuses on individual business and leisure travel, as well as travel associated with groups meetings. we emphasize high quality standards in our rooms and food and beverage divisions. We provide a fair return on investment for our owners and recognize that this cannot be done without well trained , motivated and enthusiastic employees.

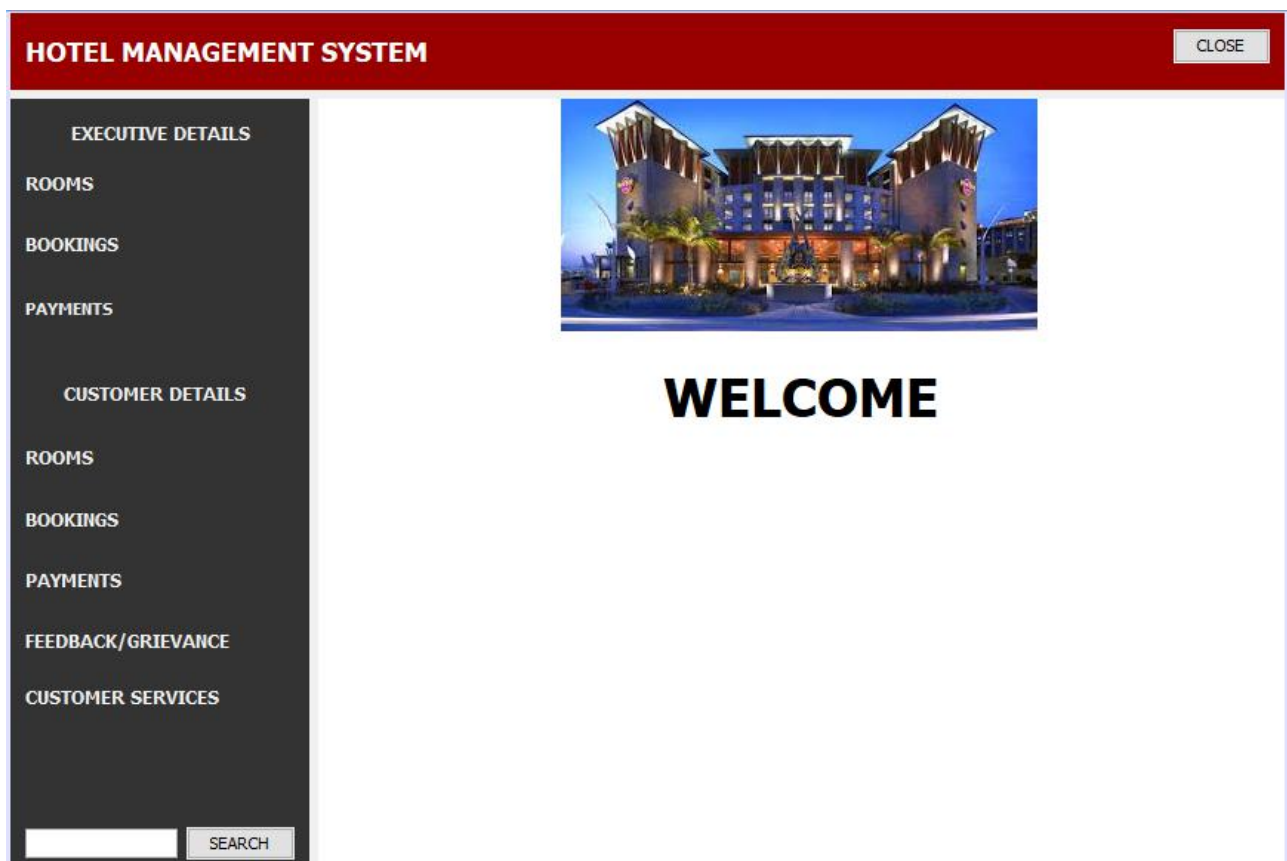

MISSION OBJECTIVE:

- To maintain (Enter, Update and Delete) data on Rooms
- To maintain (Enter, Update and Delete) data on Customer
- To maintain (Enter, Update and Delete) data on Bookings
- To maintain (Enter, Update and Delete) data on Payment
- To Search on rooms
- To Search on Customer
- To Search on Bookings

Hotel Management System

- To Search on Payment
- To track on Rooms
- To track on Customers
- To track on Bookings
- To track on Payments
- To report on rooms
- To report data on Customer
- To report on Bookings
- To report on Payments

Hotel Management System

Comments:

All good.

DASHBOARD ER DIAMGRAM:

1.2.3 Fahad Afzal & Imad Ahmed

Task:

Imad and Fahad must design and develop the room status and selection that will include available rooms, new client's insertion part, available and booked rooms and the price of rooms and client information related part.

Hotel Management System

Module:

Clients Residential module.

Scope:

We will create client's residential system. This module will help the client to make his/her choice of reservation easy. It will provide the client with the necessary information about suite and rooms which he/she needs to know.

Development Time:

This module will take about three (1) and a half month (1/2) to complete.

Mission Statement:

The purpose of Hotel Management System is to help stack holders in manage them room bookings and optimize their profit. The system will keep track of the rooms and generate information related to finance, room bookings and generate financial report.

Mission Objectives:

To maintain (Enter, Update and Delete) data on rooms.

To maintain (Enter, Update and Delete) data on Customer activities.

To maintain (Enter, Update and Delete) data on Bookings

To maintain (Enter, Update and Delete) data on Free Rooms

To maintain (Enter, Update and Delete) data on Booked Rooms

To Search on Customer

To track on Rooms

To track on Client

To track on Free Rooms

To track on Booked Rooms

To report on rooms

To report on Bookings

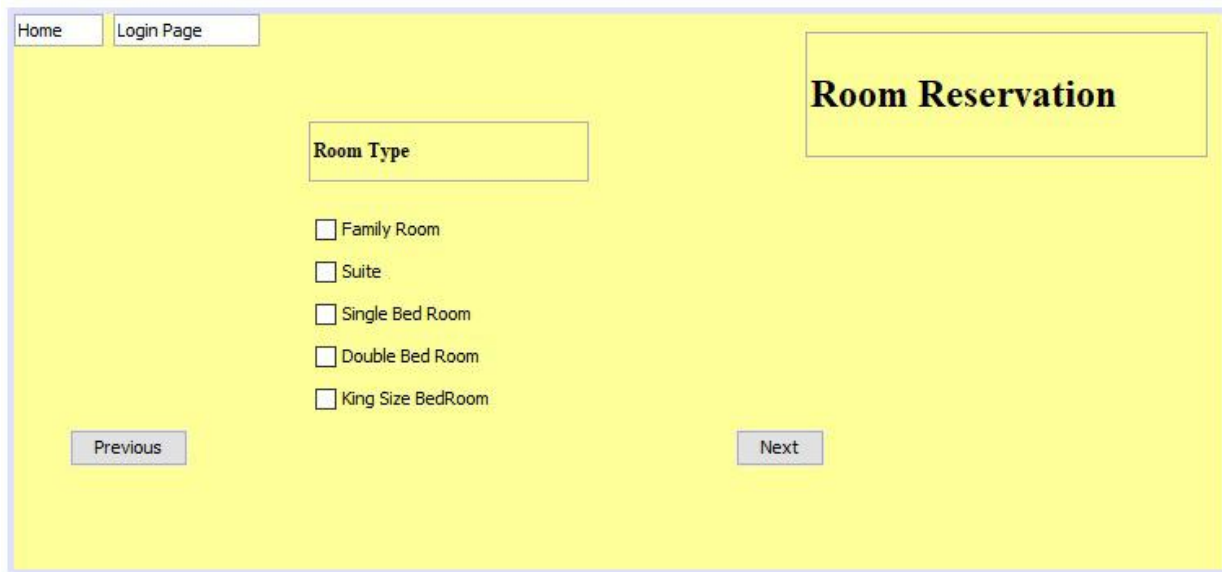

Major User Views (UI Prototypes):

SCREEN # 01

The image shows a UI prototype for a form titled "Client's Information". The form is set against a yellow background. At the top left, there is a navigation bar with "Home" and "Login Page" links. The form itself has a title "Enter Your Personal Data" in a box. Below this, there are five rows of input fields, each with a label on the left and a text box on the right. The labels are "First Name", "Last Name", "Contact num.", "Email ID.", and "City". A "NEXT" button is located at the bottom right of the form area.

Client's Information	
Enter Your Personal Data	
First Name	<input type="text"/>
Last Name	<input type="text"/>
Contact num.	<input type="text"/>
Email ID.	<input type="text"/>
City	<input type="text"/>
<input type="button" value="NEXT"/>

ER-Diagram:

Hotel Management System

.....xxxxxxxxxx**THE-END**xxxxxxxxxx.....

1.2.4 Hassan Ali Jadoon, Awais And Sardar Badar

Scope:

We will create financial module of the app. This module will generate weekly, monthly and annual Financial report of the hotel. It will also calculate the revenue generated by the rooms. In the end we will also integrate all modules of hotel management system.

Development Time:

This module requires about 1 months to be completed

Complexity:

We will use Swing Framework of Java as assigned by the instructor. Beside that we have to learn Object Oriented concepts of Java. The main issue with the swing framework that it does not have wide community thus we will have to face many issues during the learning phase, also it does not have extensive tutorials.

Mission Statement

“.The system will keep track of the rooms and generate information related to finance, Generate financial report.”

Mission Objective of Database

Mission Objective of the database is

Badar Mission Objectives:

- To maintain (Enter, Update and Delete) data on Free Rooms
- To maintain (Enter, Update and Delete) data on Booked Rooms
- To maintain (Enter, Update and Delete) data on Room Cancellation
- To report on Annual Finance

Awais Mission Objectives

- To maintain (Enter, Update and Delete) data on Customer
- To maintain (Enter, Update and Delete) data on Orders
- To maintain (Enter, Update and Delete) data on Wages
- To report on Annual Finance

Hasssan Mission Objectives:

- To maintain (Enter, Update and Delete) data on rooms
- To track on Rooms
- To track on Free Rooms
- To report on Annual Finance

Major Views:

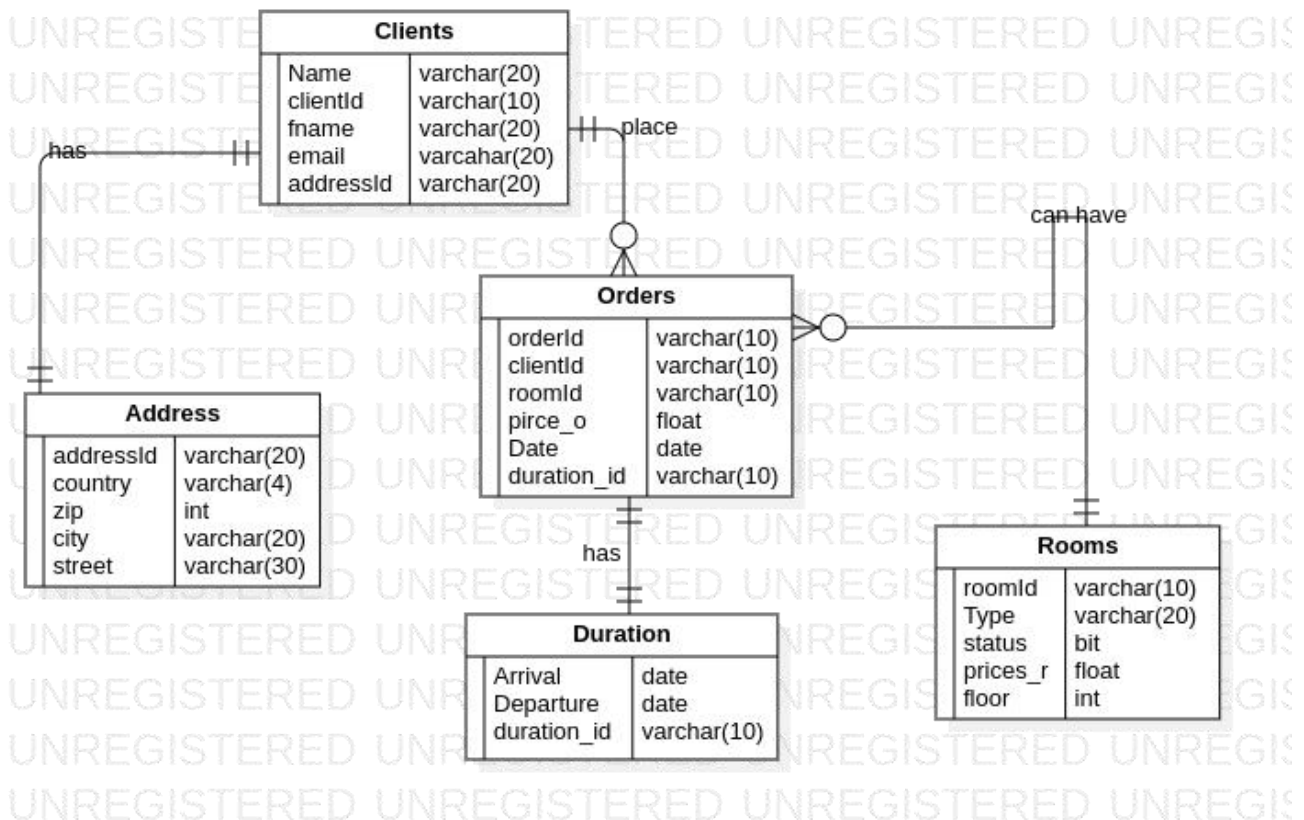

For the sake of simplicity, we are dealing with one major view.

Conclusion:

Although we deal with data financial module of app but it will take about 1 months due to wide range of complexity we will face learning framework like swing and OOP concepts as well
